Ui: 1,000 V Uimp: 8 kV Ics = 100 % Icu

Maximized Insulation Performance

- Rated insulation voltage, Ui: 1,000 V
- Rated impulse withstand voltage, Uimp: 8 kV

High Breaking Capacity

- 16 - 30 kA at 460 V (100 AF)
- 20 - 55 kA at 460 V (125 - 250 AF)
- 38 - 85 kA at 460 V (400 - 800 AF)

Cable Insulation Performance Suitability

In case of continuing abnormal conditions such as welding of main contact after trip, handle is not available to move 'OFF position' in accordance with IEC 60947-2 cable insulation performance. Also, it is possible to maintain easily by checking a contact condition by the handle.

Adjustable Rated Current

As applying to adjustable rated current design, it is possible to protect circuit optimally according to the load factor. Adjustable range of rated currents.

(Molded case circuit breakers)

- 30 - 250 AF: 80 % - 90 % - 100 % of rated current
- 400 - 800 AF: 63 % - 80 % - 100 % of rated current

HG-SERIES

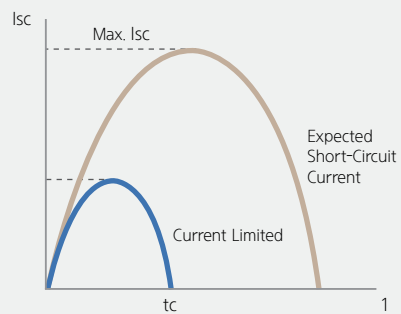

HGM Type Molded Case Circuit Breakers

- High Performance & Coordination

Service Breaking Capacity ($I_{cs} = 100\% \times I_{cu}$)

Service breaking capacity, '100 % X I_{cu}' is realized by enlarging breaking capacity with internal limit current device.

- 32 - 800 AF
 - 16 - 55 kA @ 460 Vac (Up to 250 AF)
 - 38 - 85 kA @ 460 Vac (400 - 800 AF)
- (HGM60, 100 H Type $I_{cs} = 75\% I_{cu}$, HGM60, 100 AF L Type $I_{cs} = 50\% I_{cu}$)

Current Limiting Characteristics

Available to Various Low Voltage System Protections

It is available to adapt various low voltage system protections such as 'Discrimination' and 'Cascading' with limit current characteristic and high breaking capacity.

Discrimination

It is a low voltage system protection to selectively separate fault point from system to minimize influence of fault. In this protection type, only circuit breaker installed at a fault point is operated while the other feeder can be used continuously.

Cascading

In this protection type, upstream circuit breakers can be tripped earlier than downstream circuit breaker for back up protection. So, it is applied to the smaller breaking capacity than the calculated value at down stream circuit.

HGM Type Earth Leakage Circuit Breakers

$I_{cs} = 100 \% I_{cu}$ $U_{imp} = 6 \text{ kV}$

- Standardized Size of Accessories, Compatible with MCCB
- Adjustable Residual Current and Current Cut-Off Time
- Application of 3 Phase Power Supply System, Enabling Normal Operation Under One Phase Loss Fault Adopt to EN Standards

Dimensions and Specifications Compatibility with MCCB

- Service breaking capacity, $I_{cs} = 100 \% I_{cu}$
- Rated impulse withstand voltage, $U_{imp}: 6 \text{ kV}$

Residual Current Protection Characteristics

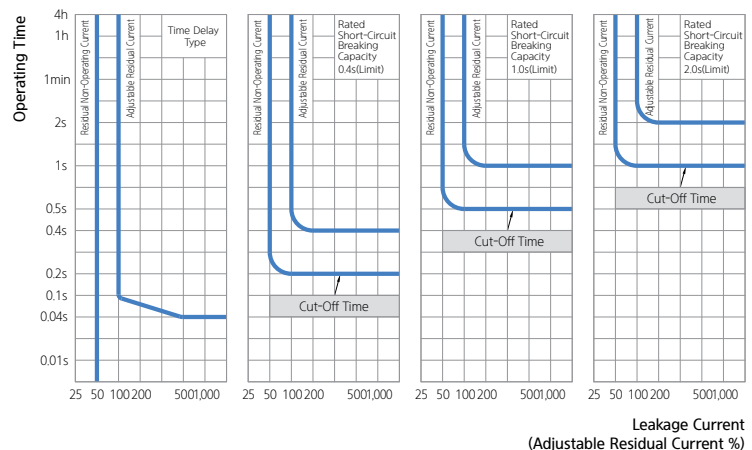

- Prevent damage from reverse connection: It is possible to prevent circuit damage under reverse connection condition.
- Prevent unnecessary malfunction on temporary leakage condition.
- Adjustable residual current and cut-off time.
- 3 Phase power supply system: Enables normal operation under one phase loss condition by adapting 3 phase power supply system.
- Protecting an inverter load safely from ground fault by adapting IC filter.

Adjustable Residual Current and Cut-Off Time

ZCT MCCB (HGM Type): 32 - 250 AF

Mounted with a ZCT (Zero phase Current Transformer) at MCCB, the reliability of the MCCB's ground fault protection is improved by linking with an external ELR.

※ 1) 4 pole arrangement: Basic specification is R-S-T-N (N-R-S-T is optional).

2) Plug-in: Applicable only 3P.

3) 2P product is just removed versus central pole of 3P product. So, 2P product's dimension is equal to 3P product's dimension.

Internal Accessories

Auxiliary Switch (AUX), Alarm Switch (ALT)

Indicates the status of circuit breaker contacts from a remote position as well as using for electric locking.

Auxiliary Switch (AUX)

- Indicating ON/OFF status of circuit breaker.
- Status is OFF when TRIP.
- Consists of C contact.

Alarm Switch (ALT)

- Activated when the circuit breaker has tripped due to an overload, short circuit or ground fault excepting manual ON/OFF operation.
- Return to original state, when circuit breaker reset.
- Consist of C contact.

Auxiliary + Alarm Switch (AXT)

- Combined AUX and ALT auxiliary switch.

Shunt Trip (SHT)

Remotely trip circuit breakers by voltage shunt trip (SHT) device.

Operation Condition

- $U \geq 0.7 \times U_n$ (Apply more than 70 % of the rated voltage.)
- In case of impulse type voltage, apply more than 20 ms

Internal Accessories

Undervoltage Trip (UVT)

In case circuit voltage is less than the reference value, the circuit breaker will not trip or close (ON). If circuit voltage falls less than 35 % of Rated voltage (U_n), UVT initiates a trip automatically to prevent damage to the load.

Opening Conditions

- Operating characteristics is guaranteed based on IEC 60947-2 standard criteria.
- Trip condition: $U \leq 0.35 \times U_n$
- Fixed: 50 ms (400 – 800 AF)
- Time Delay: 500 – 1,000 ms (Up to 250 AF)
- No Trip condition: $U \geq 0.7 \times U_n$
- In $U = 0.35 - 0.7 \times U_n$ interval, circuit breaker can be tripped but, does not warrant the operation.

Closing Conditions

- For the circuit breakers installed with UVT when voltage is not applied to the UVT, the circuit breakers is possible OFF/RESET but can not be ON (Closing).
- Voltage must be applied at UVT for closing (ON).
- Closing condition: $U \geq 0.85 \times U_n$

Time Delay Function

To prevent a malfunction in the short time voltage drop of less than 500 ms. (Up to 250 AF)

Rated Voltage and Characteristic (Up to 250 AF)

Rated Voltage (U_n)		Power consumption	
		VA (W)	A (mA)

Locking Device

Padlock Device for Handle (PLD)

This device is used for locking the handle of circuit breakers to OFF position by using padlock. Key lock is applicable upto 3 EA and not be supplied additionally. Ratings of keylock are as below.

Mechanical Interlock

This device interlocks two circuit breakers mechanically.

Features

- It prevents two breakers from closing at the same time.
- It turns two breakers all OFF.

Terminal Cover

Terminal cover is the device to insulate circuit breaker terminal from the outside for safety. It is possible to apply IP40 as protection degree of power parts. Based on the connecting methods of the circuit breakers long or short type terminals can be applied.

Short Type

Suitable for plug-in or rear connection.

Long Type

Suitable for front connection using wires, busbar, or lug terminals.

Insulation Barrier

Insulation barrier is used for preventing short-circuit fault due to dielectric breakdown between circuit breaker terminals. It improves the performance of terminal phase-to-phase insulation if installed at groove between the terminal of two circuit breakers. It can be easily assembled after the installation of the circuit breaker. In addition, it is used in terminal cover and plug-in base.

Rotary Handle

Rotary handle is the device to check for MCCB's ON/OFF/TRIP status from outside of switchgear. There are two types of rotary handle-extended type and direct type. All the rotary handles provide panel door locking and handle locking function by rotating clockwise the rotary handle, the circuit breaker operates "ON". Each rotary handle is divided into these three types the upper line, the right line, and the left line-according to attachment direction of MCCB. The IP rating of the handle is IP40.

Direct Rotary Handle (TFG Type)

- 32 - 250 AF: Attach handle directly to the circuit breaker.
- 400 - 800 AF: Attach handle to the door of switchgear.

Extended Rotary Handle

Category of Handle in Accordance with Circuit-Breaker's Installation Type

Rotary handle is divided into the following three types according to the direction of power supply.

How to Operate Handle

Operating direction: To turn 'ON' the circuit breaker function, rotate handle clockwise.

- Circuit breaker ON: Rotating the handle to ON position. (Figure 1)
- Circuit breaker OFF: Rotating the handle to OFF position. (Figure 2)
- Circuit breaker TRIP: If the circuit breaker is tripped, the handle will be switched to automatically TRIP position. (Figure 3)
- If you rotate the handle to RESET position first after the circuit breaker is tripped (Figure 4) and then rotate the handle to ON position, the circuit breaker is operated ON (Figure 1).
- If you need to open door when handle is in the ON state, rotate the RELEASE screw to direction of the arrow first and then open the door (Figure 5).

Front Connection of Fixed Devices

Select and use the busbar or LUG terminal according to specification of busbar and cable connected to circuit breaker.

Insulated Bar Connection

If busbar pitch of switchgear is equal to circuit breaker, it is possible to connect the circuit breaker directly using a insulation tube. When connected to the busbar, refer to the specification chart as below. Use the insulation barrier and terminal cover where applicable.

Application	Connection Busbar Dimensions (mm)				Applicable Bolt and Tightening Torque

Plug-in Connection Devices

Circuit breakers can be replaced quickly without cable separation by using Plug-in connection type.

It is more convenient to apply Plug-in type circuit breakers for important electric system (shipping, broadcasting etc).

- Easy and convenient to maintain and repair the switchgear.
- It is possible to remove/replace the circuit breaker quickly without contacting the terminal.
- Type: For switchboard (TDM/TDF), For panel board (TDA)
- Constitution: Plug-in devices, plug-in MCCB, terminal cover or Insulation barrier (Option)

※ 1) In order to use plug-in connection devices, please apply the plug-in type MCCB.

2) In case of not using terminal cover, please install insulation barrier.

Temperature Derating

Overcurrent characteristics of MCCB has been set to the ambient temperature 40 degrees celsius. If the ambient temperature is less or more than 40 degrees celsius, the overcurrent characteristics can be changed.

If the Ambient Temperature is Less than 40 Degrees Celsius

In order to ensure that circuit breaker's overcurrent meet the derating curve at the given ambient temperature, the rear current (Ir) should be adjusted. The temperature correction ratio for each MCCB is shown on the circuit breaker derating curve.

If the Ambient Temperature is More than 40 Degrees Celsius

If the internal temperature of the MCCB is over 40 degrees, thermal damage to the insulating material inside the MCCB can occur causing the circuit breaker to trip at an early stage. When applying ambient temperatures at higher than 40 degrees celsius, you must adjust the rated current as shown in the rated current correction table below.

In (Rated Current): Circuit breaker's rating at about ambient temperature 40 °C

Ir (Real Current): Circuit breaker's rating at about ambient temperature

$I_r = \text{Correction ratio (\%)} \times I_n$

Altitude Derating

It does not affect the characteristics of circuit breaker at an altitude of less than 2000 m. Characteristics of insulation and air cooling are reduced at an altitude of more than 2000 m. You should adjust rated current and rated voltage as shown in the table below at an altitude of more than 2000m. However, this will not change the characteristics of the circuit breaker.

Circuit Breaker	Altitude	2,000 m	3,000 m	4,000 m	5,000 m

Vibrations

The excessive vibration makes some troubles in the breakage of circuit breaker, the dynamic strength of failure, electric current, carrying and the safety operating characteristics so, choosing the circuit breaker, you need proper consideration in these environmental stress. These stress is generated by the magnetic impact of operating open and close test, vibration during transport, and the influence of adjacent equipment. Our circuit breaker is verified by test in accordance with standard of internal impulse performance.

Vibrations Test

Vibration test carried out in compliance to the IEC 60068-2-6 standards for vibration to ensure the level that the shipping certificate authority requests. The test verifies the resonance performance and vibration durability based on the following

Resonance Test

You can alter the frequency as shown in the following range of sinusoidal wave to see if there is any occurrence of vibration on a specific part of MCCB.

- 5 - 13.2 (Hz): Displacement amplitude 1 mm
- 3.2 - 100 (Hz): Acceleration amplitude 0.7 g

Vibration Durability Test

A sinusoidal wave with frequency of 30 Hz is manually created to check the operational status for 90 minutes.

- 30 (Hz): Acceleration amplitude 0.7 g

Seismic Performance and Shock Tolerance Chart

Part		Seismic Performance
Test condition	Vibration posture, Direction of impulse	<ul style="list-style-type: none"> • Vertical mounting • Top-down, Left-right, Front-back 
	Status of MCCB	<ul style="list-style-type: none"> • Non-conduction (ON or OFF status) • Status where rated current has been conducted on until the temperature of MCCB becomes constant and continuous.
Test result	Judgement condition	<ul style="list-style-type: none"> • If it is ON, it should not be OFF • If it is OFF, it should not be ON • No abnormal status such as damage, transformation, or annealing of nut part • The characteristics of switch and trip after the test must be normal

Degree of Protection

By stipulating the IP degree of MCCB based on IEC 60529 standard, the IP degree is changed according to the product condition.

Technical Information

Installation

Insulation Distance

When installing a circuit breaker, safety clearances must be kept among the breakers, panels, busbars and other protection devices installed nearby. When a short circuit interruption occurs, high temperature gas occurs and the gas is expelled above the arc chambers of the circuit breaker. In order to allow the gas to be distributed and to prevent fire and arcing or short-circuit currents, safety clearances are required.

The separation distance in the case the circuit breaker is installed side by side.

※ Using minimum separation distance (A=0), you should assemble terminal cover and phase barrier between the product.

In the case of iron panels, the distance between the upper and base side or the right and left side.

In the case of iron panels, the distance between the front and back.

In the case that the live part is exposed, the distance from the circuit breaker.

※ If the distance of both conductors is less than 60mm, please insulate the charging part.

Installation Angle

The HGM circuit breakers can be installed vertically or horizontally without changing any characteristics. Please refer to detail installation direction shown in the figure below.

Direction of Power Supply

HGM/HGE Type

Please confirm LINE/LOAD mark at circuit breaker's front cover before connecting terminal wire.

Certifications

- 165 Molded Case Circuit Breakers (MCCB)
- 167 Earth Leakage Circuit Breakers (ELCB)

Service Environment

Storage & Transportation

Storage Precaution

- Do not store in an environment containing corrosive gases (ammonia, sulfur etc)

- Do not store under high humidity

- Do not store under direct sunlight

- Do not store in an environment in which dust or dirt is present

- Avoid using this product under extremely high or low temperature and store at a temperature between -20°C and $+60^{\circ}\text{C}$

Transportation Precaution

Precaution

- Do not drop or give shock during transportation. These can cause malfunctions in the circuit breakers.
- Do not carry circuit breakers by the external wire or accessories.

- Always hold the body of the circuit breakers during transportation

- Be careful of injuries when handling sharp metal accessories

- Do not drop or give shock during transportation

- Check the packaging condition before transportation

Service Environment

Installations

For dimensions required for installation, please refer to the catalog.

▲ Precaution

- Installations must be carried out by licensed worker.
- Check whether the circuit breaker is open before performing any wiring.
- Tighten the terminal bolt using the proper torque as specified in the manual when connecting the bus or wire. Loose connections may result in.
- Tighten the terminal bolt as proper torque specified in manual or catalog. If not insulated, it may cause short-circuit fault.

- Provide enough insulating space to avoid the blockage of arc gas. Blocked arc gas vent may cause trip operation to fail.
- Do not install in an environment where hot and humid air, dust, corrosive gas, vibration and shock is present. This may cause a fire or malfunction.
- To prevent fires or malfunctions, provide appropriate measures to prevent the entry of foreign substances following installation.
- For the 4P circuit breakers, connect 3 wires and 4 poles to the neutral line.
- This product should be used with insulation barrier. Using with no insulation barrier may result in additional short-circuit fault.

Precautions for Installations

- **Install circuit breakers under the following environment conditions**

When installing circuit breakers, give due consideration to the environment conditions described below. Installation in inappropriate conditions may result in malfunction or fire.

- Ambient temperature: $-5\text{ }^{\circ}\text{C}$ - $+40\text{ }^{\circ}\text{C}$
(The average temperature for 24 hours not exceed $35\text{ }^{\circ}\text{C}$)
- Relative humidity: 45 - 85 %
- Vibration & Shock: Without excessive vibration and shock
- Altitude: Up to 2,000 m
- Without excessive water vapor, oil vapor, smoke, dust, salts and corrosive materials

- **Do not block the arc vent**
The breaking capacity may be reduced.

- **Keep away from dust, metal shaving**
After installations, please use protective cover when maintaining circuit.

- **Do not release insulation board from circuit breakers.**
The insulation performance may be reduced.

Precautions for Connection

- **Tighten the terminal bolts with proper torque specified in the manual**
Incomplete tightening of the terminal bolt may cause overheating. Also, excessive tightening of torque may cause damage to the terminal bolt and circuit breaker case.

- **Avoid using lube in terminal bolt**
Lube may reduce friction of terminal bolt.

- **Insulate the exposed conductor**
Insulate the MCCB conductor by using insulation tape. If the conductor is not be insulated, it may cause additional short-circuit fault.

- **Please do not modify STUD**
Rear connection type, do not force STUD. Also, when connecting wire, access without modifying STUD.

- **For 4P circuit breakers, connect 3 wires and 4 poles to the neutral line**

- **Please fasten conductor firmly in parallel**
Firmly fasten conductor to prevent electronic repulsion when a short-circuit fault occur.

125 (0.2)	110,815 (11,300)	55,408 (5,650)

- Before installation, be sure to clean on connection terminals

To prevent to increasing contact resistance, eliminate any dust, dirt or damages of any kind.

- Conductor should be connected directly

Bolts or Nuts is not allowed between conductors.

If the conductors are not connected directly, it may result in rising temperatures and fires.

- Conductors should be connected without overlap

When connecting several conductors, the busbar should be installed on both sides.

Inspection and Maintenance

Initial Inspection

- Terminal parts shall be clean from dust, metal pieces and so on
- Breaker shall not have any crack or damage
- Check terminal parts. It should be tightened with specified torque
- Be sure to check the value of U_e , I_{cu} of the breakers
- Insulance resistance should be more than $5 M\Omega$

Dielectric Test

Main Circuit		Secondary and Control Circuit ¹⁾	
Rated Insulation Voltage [Ui]	Test Voltage	Rated Insulation Voltage [Ui]	Test Voltage
$U_i \leq 300 V$	2,000 V for 1 min	$U_{is} \leq 60 V$	1,000 V for 1 min
$300 < U_i \leq 600 V$	2,500 V for 1 min	$60 V < U_{is} \leq 600 V$	$2 \cdot U_{is}$ 1,000 V (Minimum 1,500 V) for 1 min

※ - Dielectric strength tests should be done in these conditions.

1) Between terminals and earth

Periodic Inspection

In order to maintain the breaker performance and prevent accidents, periodical inspection shall be conducted after installation and operation.

Standard of Inspection

Standard	Circumstance	Inspection Cycle after Installation
Normal	Clean air, no humidity	Within 10 years: Once 2 - 3 year
		More than 10 years: Once a year
		More than 15 years: Once 6 month
	Dust but no corrosive gas	Within 10 years: Once 1 year
		More than 10 years: Once 6 month
		More than 15 years: Once a year
Bad	Sulfurous gas, salinity, vapor	Within 5 years: Once 6 month
		More than 5 years: Once a year
	Excessive corrosive gas	Once a month

Periodic Check Point

Item of Inspection	Procedure	Trouble Shooting
Tightening terminal torque	• Tightening torque on terminals	• Applying the tightening torque indicated in manual Too strong tightening torque may cause damage
Dust and dirt	• Confirm to breaker's body and upper side of the line part. Be sure to clean in term of dust and dirt to secure insulation	• Remove the debris with a clean tool
Case	• Check for damaged and cracked on breakers	• Replace with a new breaker
Arc exhaust part	• Check terminal part for arc exhaust.	• Replace with a new breaker in case you can find the black soot and melted metal parts on the breakers
Operation	• Manually put On and OFF several times in case of holding close position. • It makes reduce friction which is made from harden grease and stabilize contact resistance	• Replace with a new breaker in case of malfunction on ON and OFF • Replace with a new breaker in case of exceeding mechanical and electrical durability
Terminal discoloration	• Check for discolored terminal and conductor parts • Be sure to confirm insulation capability on conductor parts	• There in no problem with lightly discolored silver coating part. In case breakers have an insulation trouble caused by heat, replace with a new breaker
Insulation resistance	• Measure insulation resistance between each poles, terminal and earth	• Insulation resistance should be more than 5 M Ω . If lower than 5 M Ω , replace with new one

Inspection and Trouble Shooting After Breaking Current

- If there is no pollution in arc exhaust parts and no other abnormality, the breaker can be re-used.
- Measure the insulation resistance when carbonizing symptom is found around arc exhaust parts. If the resistance value is more than 5M Ω with no dielectric breakdown at withstand test voltage and no excessive temperature rise of terminal parts, the breaker can be re-used.
- If the handle part is carbonized or there is metallic melting in internal of breaker, please replace it with a new one.

Service Environment

Maintenance

Trouble Shooting

In case of any abnormality during breaker operation, please refer it as below. The following table lists a series of typical service conditions, to help you understand and solve hypothetical faults or malfunctions.

Problem	Symptom	Possible Cause	Trouble Shooting	
Overheating	High temperature of terminal part	• Loose connection between terminal and conductor	Mounting screw with proper torque	
		• Increased resistance between terminal and conductor	Replace with a new breaker	
	Damage in insulation part of terminal	• Loose connection between terminal and conductor • Loose connection on terminal parts caused by interference with foreign substance	Replace with a new breaker	
Overheating	High temperature of breaker body	• Increased contact resistance	Replace with a new breaker	
		• Loose internal assembly screws		
		• Increase of current density from cable disconnection		
Overheating	Abnormal voltage of load side	• Excessive contact abrasion	Replace with a new breaker	
		• Foreign substances on contact		
		• Melt down on conducting bar (Corrosion of conductor by excessive ON-OFF or corrosive gas)		
Inability of ON, OFF, and RESET	Inability of ON	• Inability of reset after trip	On after RESET	
		• Damaged trip mechanical parts due to lots of operation and improper frequency	Replace with a new breaker	
		• Non-energized UVT	Input operational control voltage	
	Inability of OFF	• Melted and adhered contact tip	Replace with a new breaker	
		Inability of RESET	• Non-energized UVT	Input operational control voltage
	• Not enough cooling on bi-metal		Cool down ambient temperature, then Reset	
	• Corruption and deformation of bi-metal		Replace with a new breaker	
	• Malfunction of mechanical parts			
	• Run out of excessive ON-OFF			
	• Damaged mechanical parts after trip on over-breaking capacity			
Frequent trip	Trip at under rated current	• High ambient temperature (Higher than 40)	Cool down ambient temperature by ventilation or others	
		• Heating by loose terminal screw connection	Tighten screws with specified torque	
		• Heating from inside of breaker	Replace with a new breaker	
		• Connection conductor of which cross-section area is smaller than specified size	Use the specified size of conductor or adjust the rated current	
	Trip at operational current	• Trip at start-up inrush current	Adjust the instantaneous trip setting or replace with a higher rated current breaker	
		• Trip at change-over in star-delta operation		
		• Instantaneous trip at reverse feeding	Replace with a higher rated current breaker	
		• Instantaneous trip at high inrush current		
• Instantaneous trip at long starting current	Repair or replace with new motors and check wiring cables			
• Short-circuit due to motor malfunction				
• Fault of connecting with SHU or UVT				
Non trip	Non trip at the current higher than specified	• Low coordination with primary protect device or miss-selected with other protect device	Reconsider of coordination	
		• Unconsidered ambient temperature	Confirm the derating current	
		• Improper rated current	Confirm rated current	
Malfunction of Accessory	Malfunction of SHT	• Over and under control voltage	Confirm rated voltage	
		• Drop of the control voltage	Keep control	
		• Incorrect coil voltage, damaged coil caused by non operating of switch in order to prevent malfunctioning	Replace with new parts	
	Malfunction of UVT	• Malfunction of mechanism part	Replace with new parts	
		• Incorrect coil voltage	Confirm control voltage	
		• Burned UVT controller of the coil	Replace or check for wiring	
	Malfunction of AUX and ALT	Malfunction of AUX and ALT	• Damaged contact caused by excessive rated operational current	Replace or check for operational current
			• Malfunction of mechanism part	Replace or repair
