TCD210233AE Autonics

# LCD Temperature/Humidity Controllers

# **TH4M Series**

# PRODUCT MANUAL

For your safety, read and follow the considerations written in the instruction manual, other manuals and Autonics website.

The specifications, dimensions, etc are subject to change without notice for product improvement Some models may be discontinued without notice.

# **Features**

- $\bullet \, \text{Simultaneous control of temperature and humidity} \\$
- $\bullet$  LCD display with easy-to-read white and blue characters
- Input correction of temperature and humidity
- Output delay time setting
- Deviation high/low-limit alarm output
- Dedicated temperature/humidity sensor THD-RM (accessory)

#### **Safety Considerations**

- Observe all 'Safety Considerations' for safe and proper operation to avoid hazards.
- ▲ symbol indicates caution due to special circumstances in which hazards may occur.

- 01. Fail-safe device must be installed when using the unit with machinery that may cause serious injury or substantial economic loss.(e.g. nuclear power control, medical equipment, ships, vehicles, railways, aircraft, combustion apparatus, safety equipment, crime/disaster prevention devices, etc.)
  Failure to follow this instruction may result in personal injury, economic loss or fire.
- 02. Do not use the unit in the place where flammable/explosive/corrosive gas, high humidity, direct sunlight, radiant heat, vibration, impact or salinity may be present.

Failure to follow this instruction may result in explosion or fire.

- 03. Install on a device panel to use.
  - Failure to follow this instruction may result in fire or electric shock.
- 04. Do not connect, repair, or inspect the unit while connected to a power source.
  - Failure to follow this instruction may result in fire or electric shock.
- 05. Check 'Connections' before wiring.

Failure to follow this instruction may result in fire.

06. Do not disassemble or modify the unit.

Failure to follow this instruction may result in fire or electric shock.

▲ Caution Failure to follow instructions may result in injury or product damage

01. When connecting the power input and relay output, use AWG 20 (0.50 mm²) cable or over, and tighten the terminal screw with a tightening torque of 0.74 to 0.90 N m.

When connecting the sensor input and communication cable without dedicated cable, use AWG 28 to 16 cable and tighten the terminal screw with a tightening torque of 0.74 to 0.90 N m.

Failure to follow this instruction may result in fire or malfunction due to contact failure.

- ${\bf 02.}\ Use the unit within the rated specifications.$ 
  - Failure to follow this instruction may result in fire or product damage
- **03.** Use a dry cloth to clean the unit, and do not use water or organic solvent. Failure to follow this instruction may result in fire or electric shock.
- Keep the product away from metal chip, dust, and wire residue which flow into the unit.

 $\label{prop:control} \textit{Failure to follow this instruction may result in fire or product damage}.$ 

#### **Cautions during Use**

- Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents
- Check the polarity of the terminals before wiring the temperature/humidity sensor. Use the cables in same thickness and length. Use the designated compensation wire for extending wire.
- Keep away from high voltage lines or power lines to prevent inductive noise. In case
  installing power line and input signal line closely, use line filter or varistor at power line
  and shielded wire at input signal line. Do not use near the equipment which generates
  strong magnetic force or high frequency noise.
- Do not apply excessive power when connecting or disconnecting the connectors of the product.

- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- Do not use the unit for other purpose (e.g. voltmeter, ammeter), but temperature/ humidity controller.
- When changing the input sensor, turn off the power first before changing. After changing the input sensor, modify the value of the corresponding parameter.
- Make a required space around the unit for radiation of heat. For accurate temperature measurement, warm up the unit over 20 min after turning on the power.
- Make sure that power supply voltage reaches to the rated voltage within 2 sec after supplying power.
- Do not wire to terminals which are not used.
- This unit may be used in the following environments.
- Indoors (in the environment condition rated in 'Specifications')
- Altitude Max. 2,000 m
- Pollution degree 2
- Installation category II

# **Ordering Information**

This is only for reference, the actual product does not support all combinations. For selecting the specified model, follow the Autonics website.

Size

M: DIN W 72  $\times$  H 72 mm

② Option I/O

2: Alarm 1/2 output

**3** Power supply 4: 100 - 240 VAC

Control output

R: Relay 2-stage

#### **Product Components**

- Product (+ bracket)
- Instruction manual
- Temperature/Humidity sensor THD-RM

#### **Sold Separately**

• Terminal protection cover: RMA-COVER

# **Unit Descriptions**

#### 1. Temperature display part (White)

- Run mode: displays temperature PV (Present value)
- $\bullet \, \mathsf{Setting} \, \mathsf{mode} \mathsf{:} \, \mathsf{displays} \, \mathsf{parameter} \, \mathsf{name} \,$

# 2. Humidity display part (Blue)

- Run mode: displays humidity SV (Setting value)
- $\bullet \, \mathsf{Setting} \, \mathsf{mode} \mathsf{:} \, \mathsf{displays} \, \mathsf{parameter} \, \mathsf{setting} \, \mathsf{value} \,$

# 3. Input key

| Display  | Name                      |
|--|---------------------------|
| [MODE]   | Mode key                  |
| $[\blacktriangleleft], [\blacktriangledown], [\blacktriangle]$ | Setting value control key |

# 4. Indicator

| Display | Name                | Description  |  |  |  |  |  |  |
|---------|---------------------|--|--|--|--|--|--|--|
| LOCK    | Lock                | Turns ON when lock function is activated (parameter) |  |  |  |  |  |  |
| TEMP    | Temperature control | Turns ON when temperature control is ON              |  |  |  |  |  |  |
| HUMI    | Humidity control    | Turns ON when humidity control is ON                 |  |  |  |  |  |  |
| OUT1/2  | Control output      | Turns ON when the control output is ON               |  |  |  |  |  |  |
| AL1/2   | Alarm output        | Turns ON when the alarm output is ON                 |  |  |  |  |  |  |

# **Crimp Terminal Specifications**

• Unit: mm, Use the crimp terminal of follow shape.

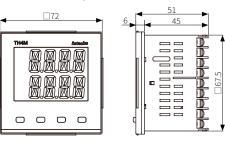

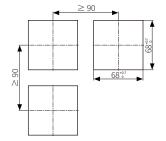

Round crimp terminal

#### **Dimensions**

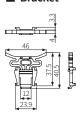

• Unit: mm, For the detailed drawings, follow the Autonics website.

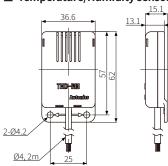

#### ■ Panel cut-out

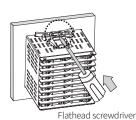

#### ■ Bracket

# **■** Temperature/Humidity sensor

#### **Installation Method**

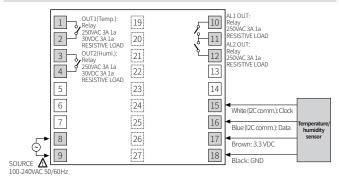

Insert the unit into a panel, fasten the bracket by pushing with tools with a flathead screwdriver.

# ■ Temperature/Humidity sensor

- Mounts sensor with M2 bolt and tighten screws by torque from 0.5 to 0.9 N.m.
- Do not impact on the unit with hard objects and do not bend the cable part too much. It may cause damage.

# Connections

## **Specifications**
